What we have now is the “Plus” package. Going to the “Pro” package will give us some extra benefits. The main one is the Secure Socket Layer (SSL). While we have a secure server, it’s much less secure than the Positive SSL. With the number of hacks lately, this would be a better choice. Our yearly cost would increase to \$431.88.

We would also get a dedicated IP address. Right now it is shared with other domains. Having our own private IP address will increase security. Our performance would also increase significantly.

Additionally, if there were to be a problem with the server going down, we would have automatic backup protection.

I will make a request for a motion to be made at the next regular meeting.
